January Bounce Back

Equity markets around the world are starting off the New Year on an optimistic trajectory, bouncing from low levels reached in late December. Anyone who pays attention to financial markets is likely aware that the fourth quarter of 2018 was a painful one for investors. The downside pressure in equity market indices culminated in a Christmas Eve selloff that was the worst in recorded history (for that particular day, December 24th). From its intraday peak on September 21st to the low reached on December 26th, the S&P 500 index fell 20.2%, wiping out the gains of the prior 18 months. Since then, however, the equity market has been steadily recovering. In fact, we're now up more than 10% from the Christmas Eve closing low. Nevertheless, that still puts the market roughly 12% below prior highs (you have to go up 25% to recover a 20% loss). The important question now is – is this just a head fake in a bear market that will resume its downward trend, or will we head back toward new all-time highs?

Our advice remains that we want to be positioned somewhat defensively as we expect market volatility to continue. This doesn't mean that we expect a recession in the near future, or that you should dramatically cut your equity market exposure in an attempt to time the market's next pullback. What it does mean is that you should favor higher quality companies with strong balance sheets (healthy cash position with minimal debt) that operate in more defensive sectors and industries, which are less sensitive to a slowing global economy. It also makes sense to focus on companies that do business primarily in the U.S. For this reason, we continue to like smaller capitalization U.S. stocks. In fact, the Russell 2000 (small capitalization) Index is up 7.36% so far in 2019 versus just 3.63% for the large capitalization S&P 500 Index.

As expected, we've experienced a dramatic pullback in inflation expectations as the Federal Reserve has tightened monetary policy amid a global economic slowdown. This could very well change over the next quarter or two as the U.S. central bank pivots toward a more "dovish" stance on interest rates, possibly allowing for a reacceleration in the rate of inflation. We may be already starting to see evidence of this in the price of oil and the resulting effect of higher stock prices for the energy sector of late. Ironically, this feedback loop will require the Fed to walk a difficult tightrope back and forth between keeping a lid on inflationary pressures and supporting the economic expansion.

Obviously, this all has implications for the fixed income markets as well. High quality bonds performed very well in the fourth quarter of 2018 as longer-term Treasury rates dropped quite dramatically to reflect the market's expectations for slowing economic growth. The 10-year Treasury rate peaked around 3.25% in early October before finishing the year just below 2.70%. Riskier high-yield (junk) bonds were not so fortunate, owing to their higher credit risk and economic sensitivity. Given our expectations that the rate of change of economic growth is likely to continue to decelerate for at least the next couple of quarters, favoring higher-quality and slightly longer-term fixed income issues remains the order of the day.

Key Retirement and Tax Numbers for 2019

Four Tips for Planning a Career Change

Women: Are you planning for retirement with one hand tied behind your back?

Should I enroll in a health savings account?

Key Retirement and Tax Numbers for 2019

Every year, the Internal Revenue Service announces cost-of-living adjustments that affect contribution limits for retirement plans and various tax deduction, exclusion, exemption, and threshold amounts. Here are a few of the key adjustments for 2019.

Employer retirement plans

- Employees who participate in 401(k), 403(b), and most 457 plans can defer up to \$19,000 in compensation in 2019 (up from \$18,500 in 2018); employees age 50 and older can defer up to an additional \$6,000 in 2019 (the same as in 2018).
- Employees participating in a SIMPLE retirement plan can defer up to \$13,000 in 2019 (up from \$12,500 in 2018), and employees age 50 and older can defer up to an additional \$3,000 in 2019 (the same as in 2018).

IRAs

The combined annual limit on contributions to traditional and Roth IRAs increased to \$6,000 in 2019 (up from \$5,500 in 2018), with individuals age 50 and older able to contribute an additional \$1,000. For individuals who are covered by a workplace retirement plan, the deduction for contributions to a traditional IRA is phased out for the following modified adjusted gross income (AGI) ranges:

	2018	2019
Single/head of household (HOH)	\$63,000 - \$73,000	\$64,000 - \$74,000
Married filing jointly (MFJ)	\$101,000 - \$121,000	\$103,000 - \$123,000
Married filing separately (MFS)	\$0 - \$10,000	\$0 - \$10,000

Note: The 2019 phaseout range is \$193,000 - \$203,000 (up from \$189,000 - \$199,000 in 2018) when the individual making the IRA contribution is not covered by a workplace retirement plan but is filing jointly with a spouse who is covered.

The modified AGI phaseout ranges for individuals to make contributions to a Roth IRA are:

	2018	2019
Single/HOH	\$120,000 - \$135,000	\$122,000 - \$137,000
MFJ	\$189,000 - \$199,000	\$193,000 - \$203,000
MFS	\$0 - \$10,000	\$0 - \$10,000

Estate and gift tax

- The annual gift tax exclusion for 2019 is \$15,000, the same as in 2018.
- The gift and estate tax basic exclusion amount for 2019 is \$11,400,000, up from \$11,180,000 in 2018.

Kiddie tax

Under the kiddie tax rules, unearned income above \$2,200 in 2019 (up from \$2,100 in 2018) is taxed using the trust and estate income tax brackets. The kiddie tax rules apply to: (1) those under age 18, (2) those age 18 whose earned income doesn't exceed one-half of their support, and (3) those ages 19 to 23 who are full-time students and whose earned income doesn't exceed one-half of their support.

Standard deduction

	2018	2019
Single	\$12,000	\$12,200
HOH	\$18,000	\$18,350
MFJ	\$24,000	\$24,400
MFS	\$12,000	\$12,200

Note: The additional standard deduction amount for the blind or aged (age 65 or older) in 2019 is \$1,650 (up from \$1,600 in 2018) for single/HOH or \$1,300 (the same as in 2018) for all other filing statuses. Special rules apply if you can be claimed as a dependent by another taxpayer.

Alternative minimum tax (AMT)

	2018	2019
Maximum AMT exemption amount		
Single/HOH	\$70,300	\$71,700
MFJ	\$109,400	\$111,700
MFS	\$54,700	\$55,850
Exemption phaseout threshold		
Single/HOH	\$500,000	\$510,300
MFJ	\$1,000,000	\$1,020,600
MFS	\$500,000	\$510,300
26% rate on AMTI* up to this amount, 28% rate on AMTI above this amount		
MFS	\$95,550	\$97,400
All others	\$191,100	\$194,800

*Alternative minimum taxable income

Four Tips for Planning a Career Change

In January 2018, the median number of years that wage and salary workers had been with their current employer was 4.2 years.

Source: Employee Tenure Summary, U.S. Bureau of Labor Statistics (September 20, 2018), [bls.org](https://www.bls.org).

Changing careers can be rewarding for many reasons, but career transitions don't always go smoothly. Your career shift may take longer than expected, or you may find yourself temporarily out of work if you need to go back to school or can't immediately find a job. Consider these four tips to help make the financial impact of the transition easier.

1. Do your homework

Before you quit your current job, make sure that you clearly understand the steps involved in a career move, including the financial and personal consequences. How long will it take you to transition from one career to the next? What are the job prospects in your new field? How will changing careers affect your income and expenses in the short and long term? Will you need additional education or training? Will your new career require more or fewer hours? Will you need to move to a different city or state? Is your spouse/partner on board?

You should also prepare a realistic budget and timeline for achieving your career goals. If you haven't already done so, build an emergency cash reserve that you can rely on, if necessary, during your career transition. It's also a good time to reduce outstanding debt by paying off credit cards and loans.

Assuming it's possible to do so, keep working in your current job while you're taking steps to prepare for your new career. Having a stable source of income and benefits can make the planning process much less stressful.

2. Protect your retirement savings

Many people tend to look at their retirement savings as an easy source of funds when confronted with new expenses or a temporary need for cash. But raiding your retirement savings, whether for the sake of convenience, to raise capital for a business you're starting, or to satisfy a short-term cash crunch, may substantially limit your options in the future. Although you may think you'll be able to make up the difference in your retirement account later — especially if your new career offers a higher salary — that may be easier said than done. In addition, you may owe income taxes and penalties for accessing your retirement funds early.

3. Consult others for advice

When planning a career move, consider talking to people who will understand some of the hurdles you'll face when changing professions

or shifting to a new industry or job. This may include a career counselor, a small-business representative, a graduate school professor, or an individual who currently holds a job in your desired field. A financial professional can also help you work through the economics of a career move and recommend steps to protect your finances.

4. Consider going back to school

You might be thinking about pursuing additional education in order to prepare for your new career. But before applying to graduate school, ask yourself whether your investment will be worthwhile. Will you be more marketable after earning your degree? Will you need to take out substantial loans?

In your search for tuition money, look first to your current employer. Some employers might cover the full cost of tuition, while others may cap reimbursement at a dollar amount. Generally, you'll be able to exclude up to \$5,250 of qualifying educational assistance benefits from your taxes.

In addition, it's likely that you'll have to satisfy other requirements set by your employer to be eligible for reimbursement benefits. These may include, and are not limited to:

- Discussing course of study with a manager or supervisor prior to enrolling (and receiving approval)
- Pursuing a degree or training that is job related
- Maintaining a minimum grade-point average
- Working a certain length of time for the company before taking advantage of the benefit
- Meeting eligibility requirements for regular benefits

Check with your human resources department to learn more about tuition reimbursement qualifications. Be sure to find out whether you can continue to work at your company while you attend school part-time.

Students attending graduate school on at least a half-time basis are eligible for Uncle Sam's three major student loans: the Stafford Loan, Perkins Loan, and graduate PLUS Loan. Also, at tax time, you might qualify for certain tax benefits, such as the Lifetime Learning credit. For more information, see IRS Publication 970, *Tax Benefits for Education*.

Women: Are you planning for retirement with one hand tied behind your back?

Women can face unique challenges when planning for retirement. Let's take a look at three of them.

First, women frequently step out of the workforce in their 20s, 30s, or 40s to care for children — a time when their job might just be kicking into high (or higher) gear.

It's a noble cause, of course. But consider this: A long break from the workforce can result in several financial losses beyond the immediate loss of a salary.

In the near term, it can mean an interruption in saving for retirement and the loss of any employer match, the loss of other employee benefits like health or disability insurance, and the postponement of student loan payments. In the mid term, it may mean a stagnant salary down the road due to difficulties re-entering the workforce and/or a loss of promotion opportunities. And in the long term, it may mean potentially lower Social Security retirement benefits because your benefit is based on the number of years you've worked and the amount you've earned. (Generally, you

need about 10 years of work, or 40 credits, to qualify for your own Social Security retirement benefits.)

Second, women generally earn less over the course of their lifetimes. Sometimes this can be explained by family caregiving responsibilities, occupational segregation, educational attainment, or part-time schedules. But that's not the whole story. A stubborn gender pay gap has women earning, on average, about 82% of what men earn for comparable full-time jobs, although the gap has narrowed to 89% for women ages 25 to 34.¹ In any event, earning less over the course of one's lifetime often means lower overall savings, retirement plan balances, and Social Security benefits.

Third, statistically, women live longer than men.² This means women will generally need to stretch their retirement savings and benefits over a longer period of time.

2) NCHS Data Brief, Number 293, December 2017

Should I enroll in a health savings account?

A health savings account (HSA) is a tax-advantaged account that you can establish and contribute to if you are enrolled in a high-deductible

health plan (HDHP). Because you shoulder a greater portion of your health-care costs, you'll usually pay a much lower premium for an HDHP than you would pay for traditional health insurance. This allows you to contribute the premium dollars you're saving to your HSA. Then, when you need medical care, you can withdraw HSA funds to cover your expenses, or opt to pay your costs out-of-pocket if you want to save your account funds. An HSA can be a powerful savings tool, especially if your health expenses are relatively low, since you may be able to build up a significant balance in your HSA over time. Before you enroll in an HSA, ask yourself the following questions:

What will your annual out-of-pocket costs be under the HDHP you're considering? Estimate these based on your current health expenses. The lower your costs, the easier it may be to accumulate HSA funds.

How much can you afford to contribute to your HSA every year? Contributing as much as you

can on a regular basis is key to building a cushion against future expenses. For 2018, you can contribute up to \$3,450 for individual coverage and \$6,900 for family coverage.

Will your employer contribute to your HSA? Employer contributions can help offset the increased financial risk that you're assuming by enrolling in an HDHP rather than traditional employer-sponsored health insurance.

Are you willing to take on more responsibility for your own health care? For example, to achieve the maximum cost savings, you may need to research costs and negotiate fees with health providers when paying out-of-pocket.

How does the coverage provided by the HDHP compare with your current health plan? Don't sacrifice coverage to save money. Read all plan materials to make sure you understand benefits, exclusions, and all costs.

What tax savings might you expect? HSA funds can be withdrawn free of federal income tax and penalties provided the money is spent on qualified health-care expenses. Depending on the state, HSA contributions and earnings may or may not be subject to state taxes. Consult your tax adviser for more information.
